waterproof

Transcription made easy

Keep your hands free for non-stop typing

Work faster and more accurately by using your foot to start and pause the playback of audio files. The ergonomic design was developed by closely studying transcriptionists' movements. No need to lift your foot, a slight press with the foot tip is enough. Both of your hands are always free for typing, allowing you to transcribe efficiently even over an extended time period.

Superior performance

- Fast and efficient playback control for quicker and more accurate transcriptions
- Anti-slip pad keeps the device fixed to the floor
- Waterproof for safe and reliable use even in wet environments
- Configurable pedal functions for a personalized transcription style

Designed for long hours of use

- Ergonomic design for comfortable use even over longer time periods
- Robust pedals and non-wearing magnetic contact switches that are built to last
- Central configuration and management save time and resources

Highlights

Fast and efficient playback control

Start, pause, rewind and fast-forward audio files with only a slight movement of the foot tip, keeping your hands free for uninterrupted typing.

Anti-slip surfaces

The anti-slip pad at the bottom of the device ensures it grips to the floor and stays in place during use. It works effortlessly on any floor surface including carpet, tile and wood. The bumps on the top surface prevent the foot from sliding off.

100% waterproof

The foot control ACC2330 is fully waterproof. All internal electronic components are sealed and protected against water damage, making it perfect for even wet environments.

Configurable pedal functions

The pedal functions can be personalized to suit your preferred transcription style via Philips SpeechControl or SpeechExec software.

Ergonomic design

The foot control was developed in cooperation with hospital ergonomists and day-to-day power users to ensure a perfectly smooth transcription process with minimal physical strain.

Heavy-duty pedals built to last

The foot control is designed to withstand long hours of regular heavy use. Magnetically controlled contact switches and rugged pedals make it a highly durable and long-lasting device.

Central management and configuration

The optional Philips SpeechExec remote device management software allows administrators to centrally manage, configure and update Philips devices, saving the company time and resources.

Versions

ACC2310

- 3-pedal design

ACC2320

- 3-pedal design

ACC2330

- 4-pedal design
- Middle pedal can be fixed in place
- Waterproof design
